Dear Rebecca,

Thanks for consulting me on this forestry determination. In general the replacement of a ford with a bridge is a positive step in terms of water quality as it is likely to reduce siltation on this stretch of the burn. The watercourse is not a SSSI, but does feed into the River Coquet SSSI downstream. I have no objections to the methodology given for the works using oil booms, sedimats etc and therefore have no further comments regarding this aspect. I note Robert's comments regarding the trees adjacent to track and would like to reiterate ensuring protection of these.

With respect to the material used for the track I am happy that it is local material from an ecological point of view - better than importing stone from outside. I note Rob has queried the location of the quarry to provide the stone and if you have any further information and require comments on this element, please let me know.

Yours sincerely,
Gill Thompson
