

# The Star Inn 2

- Replace window with a door
- Open up two closed up windows
- Replace front bar window

## Living Accommodation – Replace window with Door

Create a private entrance door for the pub's living accommodation

## Living Accommodation – Replace window with Door

Retain same width opening and cut stonework to insert a door which will become the main entrance to the pub's living accommodation. The gap's height will be within the two existing stone lintels. The colour of the door will be light grey to match up with the other external doors.

Open up 2 closed up windows  
Both windows are above the rear shop, looking onto the  
pub's courtyard

## Open up 2 closed up windows

Both windows are above the rear shop, looking onto the pub's courtyard

We would keep the exact same size, working within the existing lintels (width and height). The windows would be from the same company who recently replaced others at the pub.

Replace front bar window

Replace front bow window with a flat double sash window.  
We would keep the exact same size, working within the existing space (width and height). The windows would be from the same company who recently replaced others at the pub (like upstairs in photo).
