

**Installation of package treatment plant at Bellingham Camping and Caravanning Site, Brown Rigg,
Bellingham NE48 2JY
NP1900034**

Other Conditions Met: Compliance to submitted plans, external lighting and treatment plant colour

Compliance to submitted and approved plans (Conditions 1 and 2):

We confirm that the new package treatment plant (PTP) will shortly (within 2020) be installed as described in the listed application documents on the Decision Notice for this application. Should the detail change substantially due to ground conditions encountered on excavation, the Planning officer will be informed. Notice of commencement of the work has been submitted. Works will be complete in 2020.

External Lighting (Condition 3):

There is no external lighting involved in this installation. We confirm that, if this were to change and become the case, such lighting would meet requirements of a Dark Sky Park, and we would confirm the details with the NNPA prior to installation (note that we hold stargazing events on site and hold Northumberland Tourism 'Dark Sky Friendly' and 'Stay & Gaze' awards. We are very sensitive to lighting issues in our area. To reiterate – there are currently no plans to install any lighting whatsoever in relation to this installation.

Colour of the PTP (Condition 5):

As approved, the PTP to be installed is a WPL HiPAF unit. The documents submitted on application included photographs of such a unit and the brochure/specifications. The unit has a dark green surface, including matching access hatches. This surface is the only visible part of the plant. The associated small kiosk/cabinet that houses electrics for the air blowers is also dark green. Our landscaping plans include this kiosk (see 'Discharge of Conditions 4 & 6' document attached).
