- I've done my best with the FDA Form. Clearly the form is designed to interrogate a proposed new system serving a major development, not our plug and play two berth 'caravan' with its loo and hand basin! You'll just have to tell me what needs changing on the form. The flow from the Shepherds hut is going to be no more than 100L per day probably less, and with a residency of 50%(?). Using the online calculator I estimate the total flow through the system to be around 1.65 cubic metres per day but of course in reality it will be considerably less given that two of the three properties are holiday lets. We can judge our water consumption quite accurately from our raw water holding tank - we rarely exceed one metre cube per day except in special circumstances.
