Product Information

Product Info:

TR4 turf reinforcement mesh allows permanent trafficking by pedestrians, dogs, bikes and wheelchairs on grassed areas where this would not normally be considered. TR4 reinforcement mesh is also used for slope stabilisation to allow grass vegetation to become established.

Features & Benefits

Technical Information

TR4 turf reinforcement mesh visually disappears once the grass grows through and helps to provide a protective layer v reduces grass wear, rutting and damage. The mesh works by interlocking with the natural intertwining roots of the grass spreading weight loads and creating a stronger base. TR4 turf reinforcement mesh allows the use of the reinforced grass throughout the warmer seasons and occasionally in the winter months in some special circumstances, subject to factor as frequency of use, type of traffic, nature of the soil and surface drainage.

Reviews

TR4 turf reinforcement mesh is a 660g/m² green plastic mesh manufactured from green, part-recycled HDPE plastics. It is specially designed to provide many solutions to pedestrian access and prevent grass areas from becoming worn and rutted traffic.

Applications:

- Frequently used pedestrian grassed walkways/areas
- Lawn reinforcement
- Slope soil stabilisation
- Large dog runs or pet play areas
- Allows regular movement of wheelbarrows over grass
- Wheelchair grassed access paths
- Play areas, under swings and around climbing frames

How many pins will you require?

- 2m x 30m Roll - 100 Pins
- 1m x 10m Roll - 50 Pins
