Hi Margaret –

Further comments from Gill in relation to the above.

Thanks,

Colin

Subject: RE: 20NP0018EL Electricity Act 1989 - Relocation of wood Pole No 15, Ewe Hill, Ingram

Dear Colin,

I think that because they have indicated that they are carrying out an HRA as the Competent Authority and that they are applying for assent from Natural England for his work adjacent to the SAC (and crossing it) I do not have any further comments. I note they are not using concrete and have taken into account some of the things I mentioned in my earlier email in the method statement. We therefore do not have a further role in this application and would not want to see it called in to the SoS.

If you wish to discuss further please let me know.

Yours sincerely,
Gill Thompson

Hi Gill,

Attached is a method statement for the relocation of the pole in Ingram.

Good to get your thoughts.

Thanks,

Colin

Good morning Colin,

Many thanks for the information.

Yes, I am in direct contact with Natural England regarding these works and will be undertaking the HRA as part of their assent process.

In terms of the planning side, please see attached Method Statement and Site Plan which should cover off your queries.

If you do need anything further please let me know,

Best regards, Ross.

Dear Ross,

I refer to the above proposed works.

The proposals are adjacent to the River Breamish Site of Special Scientific Interest (SSSI) which is part of the River Tweed Special Area of Conservation (SAC), a European designated site. As such I have sought advice from the NNPA Ecologist. The Ecologist has advised that works that could impact on the features of interest of the SAC require a Habitats Regulations Assessment and that it would be for Northern Powergrid, as the Competent Authority under the Habitat Regulations, to carry this out.

This would require the provision of a method statement for the works. If it is intended to use concrete to fix the new pole the method statement should cover all the working methodologies to be employed to ensure that pollution of the burn from this activity is prevented. Measures to prevent silt entering the burn from any excavation works should also be covered as should the measures to ensure that there is no release of other pollutants to the burn (oil, diesel etc.) from the plant / machinery employed in the works. Providing the method statement is able to demonstrate there is no risk to the SAC interest features then the works could be screened out as having 'no likely significant effect' and we would then be in a position to sign the Certificate.

I hope this is clear and I look forward to receiving a Method Statement in due course. If you need any clarification, please feel free to drop me an e-mail (I am currently homeworking and this is the most reliable means of getting in touch).

I look forward to hearing from you.

Regards,

Colin
